

Workstation Package

The next evolution in network authentication and security

For Windows[®] 2000, NT 4.0, Me, 98
and 95 (with USB support) systems

What's in it for you?

- Elimination of logon and application passwords
- Reduced support costs
- State-of-the-art biometric security
- Instant access with the touch of a finger
- Award-winning, plug-n-play sensor
- Growth path that supports individual, departmental and enterprise-wide deployments

No one envies your job. You struggle to maintain password security on a daily basis and how are you rewarded? With ongoing support calls and users scribbling passwords on Post-It[®] notes. With U.are.U Pro Workstation, you no longer have to walk the line between high security and low support costs. U.are.U Pro Workstation enables you to create virtually foolproof, enterprise-wide security while eliminating passwords. With the touch of a finger on the USB-compatible U.are.U Sensor, users conveniently and securely log on.

Eliminate Passwords

U.are.U Pro Workstation includes password replacement applications that free your enterprise from the burden of passwords, all the while raising security through today's most advanced fingerprint recognition programs. For example, One Touch[™] Logon supports secure logon to PCs and Windows[®] NT/2000 networks and One Touch Internet replaces application and web-based passwords (and user names) with the touch of a finger.

Boost Security and Control

The security of user-generated passwords is often compromised in an enterprise environment, leaving you constantly grasping for how to protect executive accounts and sensitive corporate information. U.are.U Pro Workstation removes this risk. You can be sure that users are granted the specific access rights that were assigned to them... and no others. Plus, you can nearly eliminate unauthorized sharing of passwords, as well as providing forgotten passwords over the phone. U.are.U Pro Workstation supports the highest security standards, featuring multi-credential and multi-step authentication, logon password randomization, and end-to-end encrypted communications.

Increase Convenience

You dislike having to support passwords. Users dislike having to remember them – and detest being forced to change them. You no longer have to choose between security and convenience for your users. U.are.U Pro is a security product that users actually enjoy. No more passwords to remember. Best of all, no more password changes every 30 days. With the touch of a finger, authorized users gain access while others are locked out.

Cut Support Costs

Today, roughly 40% of IT administrators' phone calls are password related. As those are wiped out, you've gained back nearly half of your time.

Improve Control

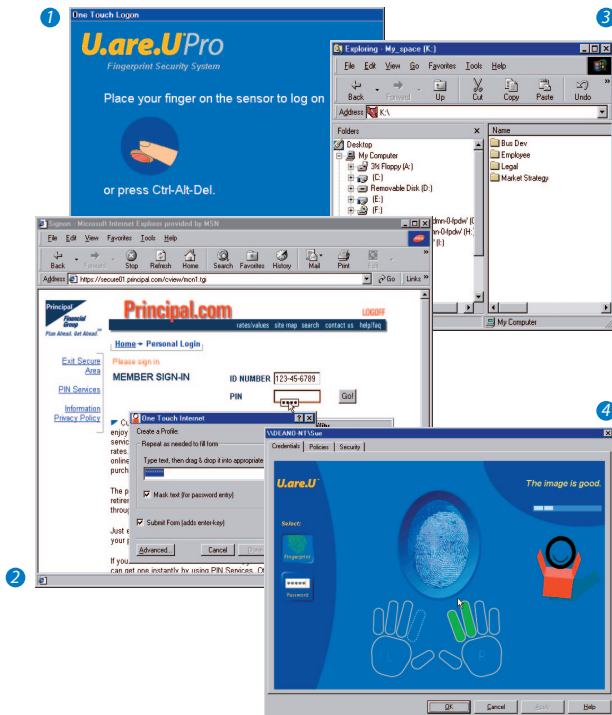

The U.are.U Pro Workstation Administrator Console software supports remote software deployment, user enrollment, and user administration from anywhere on the network. The authentication policy editor allows Windows administrators to create unique policies for individuals. It's up to you. Set the level of authentication security you want based on the network access rights of the particular user.

Minimize Administration

With our optional U.are.U Pro Server software, the Administration Console allows domain-wide administration of authentication policies and other security settings to make your job easier. U.are.U Pro Server supports both administrator and user mobility within your enterprise, allowing users to roam anywhere on the network of U.are.U Pro-enabled workstations.

Workstation Package

- 1 One Touch™ Logon provides network or local Windows logon. U.are.U Pro Workstation can be used alone or with U.are.U Pro Server for extended capabilities.
- 2 Replace passwords and user names with One Touch Internet. Configuring passwords and user names on your end is as simple as drag-and-drop.
- 3 Encrypted Private Spaces ensure the privacy of your data. With the touch of a finger, your encrypted data is as available as any other data on your computer.
- 4 Registering your credentials is quick and easy with the registration wizard.

U.are.U Pro Workstation includes:

- U.are.U Fingerprint Sensor with USB driver
- U.are.U Pro Workstation Software
 - One Touch Logon
 - One Touch Internet
 - One Touch Unlock
 - U.are.U Private Space
- U.are.U Pro Administrator Console

Specifications

Minimum System Requirements

- Supported Operating Systems
 - Windows® 2000
 - Windows® NT with SP 4 or later
 - Windows® Me
 - Windows® 98
 - Windows® 95 with USB support (OSR2 4.00.95.OB or greater)
- Pentium class processor
- USB port
- 24 MB RAM (64 MB recommended for use with Windows® NT or 2000)
- 26 MB hard disk space
- Internet Explorer® 4.0 or later.

System Management

Administration Software

- Remote access
- Controlled access
 - Windows Administrator only
 - Authentication required
- MMC snap-in integrates with Windows user database
- Windows-based console
 - User Credential Manager
 - Policy Editor
 - Security Settings
 - Remote Software Installation
 - Software Inventory Reporting

Enrollment

- Guided self-enrollment
- Supervised administrator enrollment

Language Support

- English, French, Italian, German, Spanish, Chinese (Traditional), Korean

Software Features

Windows Logon

- Keyless logon
- Password Replacement
- Supports Windows applications and web forms
- Unlimited profiles
- Multiple field entry for user name, password, etc.

Workstation Unlock

- Unlock with fingerprint
 - Screen saver lock for Windows® 95/98/Me
 - Supports native screen saver lock in Windows® NT/2000
- #### Private Spaces
- Encrypted network or local drive space
 - Invisible to other users
 - Optional installation

Security

- PKI (Public Key Infrastructure) based encryption
- Random password generation
- Secure sensor technology
- Integrated into Windows® NT/2000 security architecture
- Multi-credential policies (fingerprint and/or passwords)
- Multi-step sequential policies

Sensor

- Plug-n-play USB device
- Self calibrating
- Auto image capture
- Image capture "wink"
- Rotation invariant
- Optimal image capture
- Latent image removal
- Challenge-response link
- Encrypted transmission

Network Support

- Network Logon Support
 - Windows NT and 2000 Domains
 - Novell Netware (via Microsoft-supplied NetWare Client)
- Server storage (U.are.U Pro Server)
 - Windows NT and 2000 Domains
